

JamLogic™

A real-time application that remotely collects data from field sensing devices and third party data.

JamLogic analyses traffic flow and other data sources and outputs automated messages to motorists via variable message signs. JamLogic provides complete remote project management and control alongside analysis and reporting. The platform allows full automation and advance warning of critical road condition information via Variable Message Signs (VMS).

Benefits

Manage your VMS fleet remotely - create your own message library and schedule messages

Communicate with multiple signs at once and group signs in folders

Instantly view your messages and battery voltages

CCTV overview

Easy to access full analysis and reporting tools

Automated email alerts and updates

Real-time provision of road condition information
