

Works Egress Warning

Our Works Egress integrated system detects slow-moving works vehicles as they are about to merge from the work zone into live lanes.

Advance warning is provided to oncoming traffic via variable message signs (VMS). When the sentry radar detects a vehicle, it communicates with an integrated VMS which in turn automatically displays a warning to approaching traffic. Alerted drivers have more time to react, which significantly improves worker and road user safety.

Features

Intuitive, easy to deploy system

Detects works vehicles emerging and communicates with VMS upstream

Advance warning to **improve roadworker and road user safety**
