

Vehicle Activated Sign

The vehicle activated signs, also known as driver feedback sign, is proven to slow down traffic by alerting drivers with responsive messages reacting to their actual speed. The sign has the capability to display vehicle speed as well as simple text messages and bitmaps. The display can be customised and scheduled, and the collected speed data can be accessed remotely using our award-winning JamLogic Software.

Features

Adjustable min and max speed thresholds

Flashes if speed threshold is exceeded

Individual bitmaps can be used such as text messages, smiling faces, speed limits or logos

Automatic brightness adjustment

Remote operation/data transfer option available

Long-life reliability virtually maintenance free
