

# JamLogic

JamLogic is a real-time application that remotely collects data from field sensing devices and third party data. It analyses traffic flow and other data sources and outputs automated messages to motorists via variable message signs. JamLogic provides complete remote project management and control alongside analysis and reporting. The platform allows full automation and advance warning of critical road condition information via Variable Message Signs.

## Features

Manage your VMS fleet remotely

Communicate with multiple signs at once

View your messages and battery voltages

CCTV overview

Full analysis and reporting

Automated email alerts and updates

+ Create your own message library and schedule messages

+ Group signs in folders

+ Real-time provision of road condition information

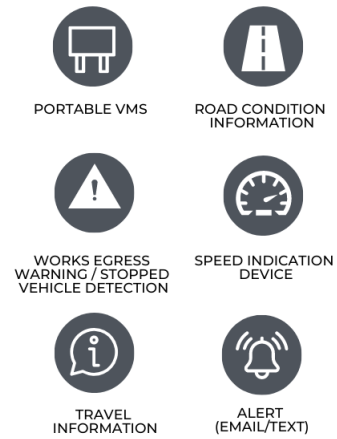

Step 1:  
Data collection

Step 2:  
Data analysis
